## KEEPING FUEL CLEAN

The RCI Purifier West has created the Fuel Purifier that takes a different approach to your needs.

According to the company, the RCI Purifier removes over 99% of the water found in all fuels and removes particulates to less than 10 microns. This is accomplished without the use of filter elements, screens, or any moving parts.

The RCI Purifier is a centrifugal separator. As the fuel enters the purifier, it flows through a baffle system causing the fuel to move in a circular motion and causes the heavier particles to drop from the fuel stream. Only clean fuel is delivered to the fuel system. (05650-A)
