

C.H. Cleans Hoses, Tanks, MSDs and Smart Tank Monitor expand Raritan's green product lineup.

inconvenient time and/or place with no pump-out facility nearby. In a worst-case scenario, some boat owners have been known to discharge the waste overboard in this situation, adding to water pollution.

Raritan's Smart Monitor's easy-to-read tank level indicators can prevent that from happening. In addition the system can monitor up to four tanks from one convenient location.

Smart Tank Monitor's many other benefits include:

- Parts are mounted outside of the tank, eliminating the need for special tank fittings
- Reliable electronic design purpose-built for the marine environment
- Works with any tank material, fresh, gray wastewater and fuel
- User programmable tank names directly from display, multiple display options.
- Network based system with illuminated display.

Headquartered in Millville, N.J., Raritan Engineering manufactures equipment for pleasure boats throughout the world. Its products include marine toilets, waste treatment systems, ice-makers and water heaters.

## RCI Technologies

### Diesel Fuel Purification Products Now Green Clean Certified

RCI Technologies, based in San Dimas, Calif., has been providing fuel purifiers and fuel recirculation systems to the boating and other transportation industries worldwide for 15 years. Now RCI's purifiers, which are also components of their recirculation systems, designed utilizing RCI's patented filterless technology, have been certified by the Green Clean Institute.

# THE MOST RELIABLE ENGINES AND GENERATORS ALSO HAVE THE MOST RELIABLE DISTRIBUTORS.

### Westerbeke Diesel Engines

11-55 HP, 1 to 4 cylinders, naturally aspirated, quiet, compact and lightweight, 5-year limited warranties.

### Universal Diesel Engines

20-42 HP, 3- and 4-cylinder, high torque to move heavy boats, environmentally friendly, 5-year limited warranties.

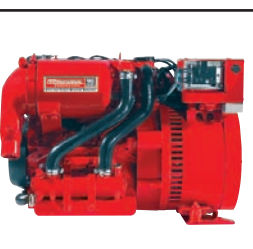

### Century Diesels and Generators

126 & 175 HP turbo-charged engines; 40 to 95 kW generators, light, compact, rugged; 5-year limited warranties.

### D-NET™ NMEA 2000 Systems

Electrical power and the digital highway on just one cable linking all the NMEA 2000 devices; 5.5 to 33 kW.

### Safe-CO® Gas Generators

Slash deadly CO emissions by more than 99% for improved safety afloat; award-winning gensets from 5 to 22.5 kW.

Westerbeke has Master Distributors in 51 countries connecting a network of more than 600 dealers worldwide.

A proudly American company with worldwide sales and unsurpassed customer support.

Robert Randle, president of RCI Technologies, with a Green Clean certified portable tank cleaning unit.

**Green audit**

RCI's fuel purifiers were awarded Green Clean Institute certification in November 2008. The Green Clean Institute is an independent, third-party organization that provides Green Clean certification in addition to education and training on green practices and awareness for hundreds of businesses. The institute researched the claims and properties of RCI's purifiers, conducted a green audit, surveyed customers and reviewed numerous test results before granting the Green Clean certification.

According to the official report from the Green Clean Institute, "The RCI Technologies' Diesel Fuel Purifier is considered as positive as an EcoGreen product. Product scores are highly effective and at the highest level of Green product consideration. Immediate and long-term exposure to this product indicates no volatile organic compounds or lifecycle harm to the environment.... The environmental benefits are seen in sustainability virtues and pollution

reduction, which are added benefits of these purifiers."

**Reducing emissions**

By purifying fuel, RCI's purifiers help reduce exhaust emissions. The purifiers are filterless, so no paper is used in production, and they operate without the need for chemicals.

RCI purifiers also prolong the life of the engine's primary fuel filter, resulting in fewer trees being cut to produce them and fewer discarded fuel filters sent to landfills.

"When you use any conventional fuel filter, you remove and discard 80 percent to 90 percent of good fuel in order to get rid of the 10 percent to 20 percent of contaminants that are clogging the filter," Randle said. "With the RCI purifier, it's the opposite – 90 percent of what you remove is water and contaminants, with only 10 percent to 20 percent fuel.

"Don't get me wrong, there is a need for conventional filters," he added. "But when an RCI purifier is used along with them, you extend their usable life by as much as five times longer. Reducing

hazardous waste is definitely good for the environment."

The Green Clean Institute extended certification to this product "in the confident belief that RCI Technologies' Diesel Fuel Purifiers are an earth-friendly, human-safe and energy-saving benefit to the end users. This product has Green virtues that cannot be ignored in a fair evaluation of the process."

**Environmentally responsible**

This certification has particular appeal to RCI's customers who are looking for ways to be more environmentally responsible. "Every day, more and more companies are becoming aware of the importance of being green," Randle said. "Nowadays we're seeing green vehicles, green equipment and even green buildings. RCI products have always been green by design, even before the term 'green' caught on."
