he had progressed to the position of Chief Financial Officer. Mr. Madden acquired his MBA degree from The University of Chicago's Graduate School of Business.

### ► RCI TECHNOLOGIES SIGNS INTERNATIONAL DISTRIBUTORS

RCI Technologies has signed seven new international distributors of RCI's diesel fuel purification products. The new distributors are located in South America, Central America and Asia.

The appointees are Juan Carlos Toledo of Equipetrol SA in Colombia; Jorge Salas of General Parts in Santiago, Chile; Marlon Gomes of LGM Austech Com. Ind. Iportcao Exportacao Ltda in Brazil; Jorge Luis Ramirez M. of Lavatanq Ramirez in Costa Rica; Darius Ng of GLW Oil Purifiner Pvt Ltd. in Singapore; Sunil Chhetri of Hansraj Hulaschand & Co. (P) Ltd. in Nepal; and Filip de Ruwe of PT Fitch Indonesia in Indonesia.

RCI's products are used by the commercial marine, trucking, bus, railroad, service station, construction and agricultural industries, as well as local, county, state and federal government agencies.

RCI's fuel purifiers, which earned Green Clean Institute certification in November 2008, are designed utilizing RCI's patented filterless technology.

### ► JUNGCE CONTROL CELEBRATES 30 YEARS

Junge Control, Inc. is celebrating its 30th year in the automated blending systems industry. Throughout these 30 years, Junge Control has continuously invented new products and updated their existing products.

In 1984, the Chem Way System was invented and changed the way the agriculture industry measured bulk chemicals. Among the products that have been introduced in recent years are: Fuel Manager, Bio Blender, Junge Injector, NH3 Express Loader, Departure Link - Aerial Automated Blending System, Multiple Range Scales, Round the Clock Assistant, and Portable Blending Systems. Many of Junge Control's products now feature touch screens.

In 2006, Junge Control entered the fuel industry with its Fuel Manager product. Fuel Manager blends any percent of biodiesel or ethanol and has the capability to inject additives—premium and winterizers. With this product, a company can reduce inventory and tanks, have accurate accounting records of every transaction and choose continuous or splash blends.

Since 2006, millions of gallons of fuel have been blended with Fuel Manager. During the past two years, Junge Control has introduced two additional fuel products. The Junge Injector adds premium additives, winter additives, or dyes to fuel. The Bio Blender™ is designed for simple two-product blends. It accurately and easily mixes bio and diesel or heating oil. The Bio Blender™ can be used at a truck stop, bulk plant or off-terminal site.

Junge Control, Inc. plans to grow and develop new and innovative products in the future by “continuing to listen to customers' wants and needs.”
