Outdoor cleaning system

The Cyclone walk-behind outdoor surface cleaner removes heavy buildup in a single pass, without the hassles of traditional pressure washing. The system features the manufacturer's Cyclone cleaning head, which incorporates eight turbine blades spinning at high speeds to create a vortex of air, water and debris. The head and turbine rotate to create lift that keeps water from pooling, simultaneously allowing incoming high-pressure water to contact the surface while providing water recovery without a vacuum system. Recovered water is pumped to the trailer system where waste contaminants are filtered out in three stages and clean water is sent back to the cleaning head for re-use.

Advance, Plymouth, Minn.

or turn off electric lighting in a vacant space. They reduce lighting use by 25 to 40 percent, according to the manufacturer. One sensor communicates with up to 10 switching, stepped dimming or continuous dimming devices in multiple zones. Up to three sensors can be added. Buttons on the front enable setup, calibration and testing. To install, place the sensor on the ceiling and replace a standard light switch with a compatible dimmer or switch from the manufacturer. Several mounting options are available for a variety of ceiling materials.

HD displays

The manufacturer's 32- and 24-inch monitors (models PMCL532F and PMCL524F full HD displays) now qualify as Energy Star products.

The monitors deliver 1080p full high-definition video. Designed for the around-the-clock demands of surveillance, the displays carry a three-year warranty.

Diesel fuel purifiers

The manufacturer's fuel purifiers have been recertified by the Green Clean Institute, an independent third-party organization that reviews, researches and certifies various industrial services

for their green credibility. The products remove 99.9 percent of water and up to 98 percent of dust, dirt and other natural contaminants found in all diesel fuel. They are suited for marine, trucking and bus applications, and at pumping stations and fuel docks.

LED lighting fixture

The SATS is an LED street and area lighting fixture available as part of the manufacturer's Satellite series. The fixture is environmentally friendly and is RoHS-compliant and approved by the Dark Sky Association. It provides up to 80 percent energy savings, according to the manufacturer, and is available in 24 and 48 LED models and a range of finishes. The low-maintenance fixture is built with a 20-year design life. A wall-mounting bracket is available.
