into existing air towers that previously housed Thomas air compressors. The unit features include ¾ horse power and can inflate tires up to 100 psi.

► **DRESSER WAYNE TO INSTALL CIM-TEK FILTERS**

A , a manufacturer of fuel dispensers and technologies, has announced that it will upgrade dispenser production

by using Cim-Tek "Absolute-Rated" Microglass dispenser filters.

The move is aimed at protecting sensitive dispenser meters, reducing warranty claims and delivering unsurpassed fuel cleanliness. Absolute-R filters offer filtration efficiencies in the range of 98.6 percent to 99.5 percent. The higher quality allows fewer particles to pass through the media, thus reducing wear on the meter.

► **RCI TECHNOLOGIES' FUEL PURIFIERS RECERTIFIED AS 'GREEN'**

California-based manufacturer RCI Technologies' fuel purifiers have been

recertified by the Green Clean Institute, an independent third-party organization that reviews, researches and certifies various industrial services for "green" credibility.

The Green Clean Institute researched the claims and properties of RCI's purifiers, conducted a green audit, surveyed customers and reviewed numerous test results before granting the Green Clean certification.

FLEX-ING
Fueling Systems

One source. Complete Solutions.

- ☑ Trusted industry leader
- ☑ Commitment to quality and customer service
- ☑ Expansive product line offers what you need when you need it
- ☑ One-stop shopping saves you time and money

a permanent bond between the EVOH resin fuel contact layer and the rugged PE100 high-density polyethylene outer structural layer, providing a new level of protection, performance and dependability.

Additionally, the unpigmented EVOH resin liner combined with the PE100 HDPE outer layer provides greater strength properties that allow a reduction in the overall thickness of the HDPE outer layer, while still maintaining the stringent permeation requirements and pressure rating of the EN14125 Standard Pipe. This new feature allows for a greater inner pipe diameter and the potential for increased

flow rates, as well as decreased pressure loss that can translate into increased throughput, reduced filling times and energy savings through reduced pressure requirements.

Additionally, OPW Fueling Systems was slated to begin shipping EN14125 Standard Pipe with the new EVOH inner liner in March.

▶ OPW LAUNCHES YOUTUBE CHANNEL

OPW has launched its own YouTube channel. The channel, which can be found at www.youtube.com/opwglobal, was designed to be a repository for an array

of videos and animations focused on the company and its products.

OPW anticipates that the video-sharing channel will serve as a reference for distributors and customers on OPW and its products.

Preventative Maintenance at its *Purest!*

RCI Technologies has
"The Permanent Solution" for removing water and dirt in:

- ALL ENGINE APPLICATIONS
- FUEL STORAGE TANKS
- DISPENSER PUMPS
- EMERGENCY GEN-SETS
- MARINE APPLICATIONS

No serviceable parts, No filters, screens or any other parts that need to be scraped, cleaned or replaced. Particulate removal to 10 microns. 99% water removal.

Reduce down time and maintenance costs, increase engine performance and mileage.

- Diesel Fuel Purifiers – ½ gpm up to 400 gpm flow rates.
- Portable Tank Cleaning Units – 14 gpm up to 60 gpm flow rates.
- Automatic Fuel Recirculating Systems – single and multiple tank systems

1/2 gpm Fuel Purifier

400 gpm Fuel Purifier

Portable Tank Cleaning Unit

We accept Visa, MasterCard and American Express
