A RESOURCE FOR GOVERNMENTS AND GOVERNMENT CONTRACTORS

## Selecting a locator

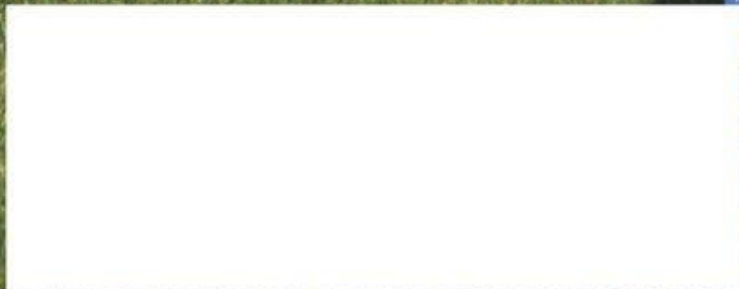

Protect against damage to utilities with easy to use locator gear

Tanks & Storage Connector

Safety improved through geocoding in GIS

Infrared asphalt repair

PUBLICATIONS MANAGEMENT AGREEMENT NO. 40009270

### Heavy-duty in-ground scissor lift

The EFX60 is a new heavy-duty in-ground scissor lift that incorporates patented design features to make lift setup and operation faster and easier, resulting in more productive technicians and less vehicle downtime.

The EFX60 uses Rotary Lift's patented universal style lifting saddle with flip-up adapters to make lift set-up easy. The lift is compatible with the industry's widest selection of lightweight adapters, many of which

are third-party certified. It has an infinite adapter adjustment range, enabling technicians to precisely position adapters exactly where they're needed for proper lifting. The adapters also swivel, making it possible to pick up vehicles by either the frame or the axle. As a result, technicians using the EFX60 can properly lift and service virtually any medium-duty or heavy-

duty vehicle weighing up to 60,000 pounds.

This lift uses heavier, larger centering links that are 33 percent stronger than those on comparable lifts. Its heavier pivot pins are 37 percent stronger and offer 12.5 percent more bearing surface area for extended service life. The pins are also protected by Rotary's Smartguard corrosion protection. Finally, the EFX60's reinforced cover plates are 59 percent stronger than those used by other in-ground scissor lifts.

### Shed material with no crossmembers

The Rugby Eliminator is available with a crossmemberless understructure that helps shed material and prevents dirt and debris build-up. The underside of the body stays clean, ensuring maximum corrosion resistance, while providing superior strength and durability.

The crossmemberless design is up to five percent lighter than a traditional stacked understructure design and also offers a lower

mounting height. Body options include stainless steel and 10-gauge steel with Rugby's quality hoists.

### Quality dump trailers

Positioned between Bri-Mar's HD and the company's entry level Rascal line, the new LE line of dump trailers provides users a top quality trailer with less frills.

All models feature Bri-Mar's Monarch pumps and hydraulic cylinders, ALKO Ultru-Lube axles and PPG powder-coat finishing system. Other standard features include six-inch channel mainframes, three-inch channel crossmembers, 10 gauge floors, diamond plate fenders, lockable battery boxes, full length tarp tie-down rods and seven-way RV style pigtails with sealed harnesses.

### Automatic fuel recirculating system

Fuel purifier manufacturer RCI Technologies now offers an entry-level line of its Automatic Fuel Recirculating Systems (FRS).

Like RCI's regular FRS units, the entry-level system automatically cleans and circulates the customer's stored fuel on a preprogrammed schedule; is PLC-controlled; has a key switch and a 24-hour, seven-day programmable clock; is UL-listed; and is housed in a NEMA 4 key-lockable cabinet.

The EL model, priced lower than the regular units, differs by having no touch screen and no internal enclosures for the wiring inside the cabinet; the PLC controls the alarms only; and power upgrades are the only option available.

The EL series is available in three flow rates: 5 gpm (FRS 660-5-EL-UL), 11 gpm (FRS 660-11-EL-UL) and 25 gpm (FRS 660-25-EL-UL).
