

Fuel Purifier

FP 800

LAIDLAW TRANSIT, INC.

“The solution to eliminate clogged filters and delays at the pump...”

“We are so happy, we purchased another...”

Since we have 122 buses in our fleet and are pumping approximately 5000 gallons of fuel per night, we were using between three and five fuel filters on our pumps, per week, to remove the water and other contaminants. However, not only were we still experiencing problems with our fuel but it was costing us approximately \$200 per month on filters for the pumps.

We knew there must be a better way. We heard about the RCI Technologies fuel purifier and decided to try it on one of our fuel pumps. We removed the fuel filter, installed the RCI purifier and are extremely happy with the results. In fact, we are so happy we just purchased another RCI purifier. We will be replacing all the fuel filters on our pumps with the RCI units.

Not only are our drivers not experiencing problems with clogged filters and delays at the pump but the purifier is producing good, clean fuel for their buses. They love it! To top off this good news, the purifier is a permanent solution that requires no replacement or changeable cartridge or cleaning of a filter element. You simply drain it periodically and that's all. It is maintenance free and will save us a lot of money.

If you use diesel fuel, the RCI Diesel Fuel Purifier is your best friend. We highly recommend it!
