

# RCI Technologies "Solutions"

Bringing you the latest news from RCI and solutions to your fuel filtration needs

RCI Technologies  
"Solutions"

Issue No. 9 • Winter 2011-12

## IN THIS ISSUE:

[RCI Welcomes ...](#)

[Upcoming Trade Shows](#)

[Quick Links](#)

[Seeking Dealers](#)

[Fuel Purifier Installations](#)

[RCI vs. Conventional Filtration Systems](#)

## RCI Welcomes ...

• **Petroleum Services Group** - Waycross, Ga. (distributor)

• **Tank Cleaning and Fuel Remediation LLC** - Billings, Mont. (distributor)

## Come Meet Us at the Show!

• **FEB. 16-20:**  
[Miami International Boat Show](#) (Miami, Fla.), Booth 4163

• **FEB. 21-23:**  
[WPMA National Convention & Convenience Store Expo](#) (Las Vegas, Nev.), Booth 623

• **MARCH 13-15:**  
[National Facilities Management & Technology Conference/Exposition](#) (Baltimore, Md.), Booth 2550

• **MARCH 14-16:**  
[Asia Pacific Maritime 2012](#) (Singapore), Booth Q03

*RCI at Power-Gen 2011  
this past December in  
Las Vegas*

*RCI at the 2011  
International Workboat  
Show in New Orleans*

## Seeking Dealers

Are you interested in becoming a dealer or distributor for RCI Technologies? Call us at (800) 868-2088 or send an e-mail to [info@rcitechnologies.com](mailto:info@rcitechnologies.com).

## Fuel Purifiers at Work Around the Globe

RCI distributor Jorge Luis Ramirez with Lavatanq Ramirez S.A. in Costa Rica sent these photos of an FP 80 and an FP 400 installed by customer CITI de Costa Rica.

RCI distributor Anju Thakur with Growmore Advisors Pvt. Ltd. in New Delhi, India sent us this photo of an FP 80 (see inset) installed on a Kalmar Reachstacker by customer Mahanadi Coalfields Limited.

RCI distributor Badr Alwan in Dubai, UAE sent photos of several FPs installed by customers. The photo below shows two FP 1000s installed aboard the yacht Rashid 1 docked at a marina in Umm Al Quwain, UAE.

Here are three more FP installation photos Badr sent from the Middle East. Left: An FP 3000 in use by customer AH International, one of the largest fuel distributors in Fujairah City, UAE. Center: An FP 4000 installed at Waset Power Station, one of the largest power stations in Sharjah City, UAE. Right: Badr stands beside five FP 4000's at Aljaber Company in Abu Dhabi City, UAE.

## RCI vs. Conventional Filtration Systems

1) The RCI Technologies Fuel Recirculating System (FRS) is designed to remove a minimum of 99% of the water and 95% of the solid or particulate contaminants found in stored fuel.

2) The RCI Technologies FRS systems have an initial capital expense in most cases 30% less than other fuel systems and at least 80% less in ongoing maintenance costs.

3) The RCI Technologies FRS system offers a tool to do the job and has NO consumables. It requires NO replacement filters, elements or cartridges to clean, change or replace and maintain an inventory of associated parts. The RCI Technologies FRS system requires only a simple purging of the fuel purifier. This function requires NO tools and takes less than five minutes to perform.

4) The RCI Technologies FRS system is rated at 11 GPM, providing more cleaning per hour (660 gph), thus reducing the customer's utility cost and run time.

5) Depending on the condition of the fuel in the storage tank and/or delivered, the conventional system can require the replacement of two or more spin-on filters and the removal and cleaning of the system's pre-cleaner and an internal screen as often as once or twice a month. This procedure would require an ongoing excessive labor and hazardous waste disposal cost for the end user. When you change a spin-on filter, 80% of what you throw away is good fuel to dispose of the 20% contamination.

6) Regardless of the condition of the stored fuel, maintenance on the RCI Technologies FRS system is a simple purging. With the RCI Technologies FRS system, you only dispose of the contaminants, which consist of oily water and particulates.

## RCI Technologies

"THE PERMANENT SOLUTION"

Made in the U.S.A.
