FOR IMMEDIATE RELEASE

THE RCI FUEL PURIFIER

After five years experience in numerous United States and International markets, RCI Purifier West is pleased to announce it has extended it's warranty for all RCI Purifiers to a full five year period. During this five year exposure we have experienced virtually no warranty replacement claims and are confident of the continued reliability, ease and satisfactory operation of the RCI Fuel Purifier.

Our current line of Fuel Purifiers, incorporates both air purge valves and sensor ports. RCI also has a sensor kit permitting remote monitoring of the Fuel Purifier. In addition all Purifiers are now constructed with a specially designed interior baffle system for rough terrain, steep slopes or rough seas. Also, to help insure against rust and corrosion all Purifiers, mounting straps, and brackets are now powder coated.

The RCI Fuel Purifier has been designed to remove over 99% of all water and up to 98% of dust, dirt and other normal and natural contaminants found in all types of engine or burner fuel. This system removes the contamination before the fuel enters the engine's primary filter system and operates without the use of replaceable, changeable, or cleanable filter elements or cartridges.

The Purifier uses the centrifugal separation principle to separate water and other contaminants from fuel. As fuel enters the Purifier, it flows through an internal baffle system which causes the fuel to move in a circular movement. Once moving in this manner, the fuel collides with a deflector plate designed to separate water, suspended solids and other contaminants. Only clean fuel rises to the top and flows to the engines filter system. The water and other contaminants accumulate at the bottom of the purifier until purged.

With the sensor installed, a buzzer and light indicates when the sump reaches approximately 40% of capacity. At this level the operator has plenty of advance warning to purge the Purifier.

Sizes of RCI Purifiers range from 1/2 gpm fuel flow up to 400 gpm and are designed for virtually all engine applications including bus and truck markets, construction equipment, generator sets, and numerous commercial or industrial applications. RCI continues to manufacture a complete line of Purifiers dedicated to the marine industry.
