

***A QUICK AND EFFICIENT METHOD OF REMOVING  
TANK CONTAMINATION...  
THERE IS NOTHING ELSE TO PURCHASE...***

All stored hydrocarbon fuel, especially diesel fuel, becomes a breeding ground for contamination; usually visible in the form of dark cloudy fuel, algae, and sludge build up. Consider RCI Technologies' Portable Tank Cleaning Unit. The RC-PTCU is a custom designed Portable Tank Cleaning system that fits through doorways, elevators, and even gated docks at marinas. Our unit can clean storage tanks from rooftops to basements to fuel vaults, is self-contained, comes equipped with a pick-up and return hose, and is complete with check valves and nozzles. There is nothing else to purchase. The proven RCI Fuel Purifier is matched to the customers specified fuel pump and motor. Customers may choose from two standard models; a 110 AC motor and pump (rated at 18 gpm) or a 12 volt DC motor and pump (rated at 14 gpm). RCI Technologies also offers models utilizing high flow with 12 or 24-volt motors, 220 volts AC or 230 volts 50 Hz motor for our European customers.

The self-priming pump provides the operator with a quick and efficient method of removing contamination with a minimum of fuel loss, (you only purge out the "junk") greatly reduce hazardous waste volume and costs, and since the RC-PTCU features the proven RCI Fuel Purifier, there are NO filter elements or cartridges to change, clean, or replace. THE PERMANENT SOLUTION to protecting your equipment.
