MAINTAIN OPTIMAL FUEL QUALITY WITH THE FRS-660

San Dimas, California – October 20, 2004: RCI Technologies is pleased to introduce the *FRS-660*, a new model in our product line of fuel cleaning and fuel recirculating systems. Made in the U.S.A., the *FRS-660* is a fully automatic programmable maintenance unit, packaged as a pre-engineered integrated system, to accommodate various applications from 11 gpm up to 150 gpm, single or multiple tank applications. Utilizing RCI Technologies' unique fuel purifiers, the *FRS-660* contains no filters, no elements or no cartridges to clean or replace.

The *FRS-660* is designed for use with fuel oil, class II or class III combustible liquids having a flash point of 100°F or higher. All devices, wiring, and plumbing are fully enclosed within a NEMA-3R weatherproof enclosure, isolated compartments are provided for mechanical and electrical components, system is suitable for wall or pad mounting

Recirculating with the *FRS-660* will remove over 95% of all free water and up to 98% of normal and natural contaminants, including sludge and algae. The *FRS-660* will also dramatically extend your filter life and improve engine performance, as well as increase combustibility. RCI Technologies' fuel purifiers contain no filters or elements, there are no other parts to purchase or cartridges to replace or clean. Maintain optimal fuel quality with RCI Technologies' *FRS-660*.
