

Water Sensor Kit (FP Option)

PRODUCT NUMBER:

RC-WS / RC-WS-OEM

PRODUCT DESCRIPTION:

The RCI Water Sensor Kits were designed to operate with any of the RCI Purifiers and signal the user when the unit needs to be purged. On the Universal water sensor model, a buzzer followed by a red indicator light will come on when the water level in the purifier reaches the sensor level. The buzzer lasts 10 seconds but the light will remain lit until the unit is purged. The OEM water sensor module only has the indicator light but it also has an additional lead which sends a positive signal (equal to the input voltage) when the unit needs to be purged. The lead can be connected to a local system or alarm.

PRODUCT FEATURES:

Product	Water Sensor Kit
Model	RC-WS / RC-WS-OEM
Sensor Port	1/8" NPT (Reducer required on FP 1000+)
Power Requirement	12/24 volt DC
Power Draw FLA	40 micro amp @ 10V
OEM Output Signal	Approximately equal to input voltage (solid state output)
Options	RC-OEM (OEM indicator module) RC-IND (Universal indicator module) RC-PROBE (Water sensor probe)
